SUMMARY

Global Peanut Market Summary Q2 2026: Peanut markets are broadly firming worldwide, driven mainly by weather-related supply constraints in China, India, and Argentina, while the US carries record stocks that provide a supply buffer; July rainfall, Argentina's harvest progress, and Indonesia's July 25 export quota decision are the key near-term variables procurement and sales teams should track.

China: Domestic supply is tightening as Henan's crushing-season stock is largely depleted from drought and flooding damage, while oil mills are purchasing at record pace, pushing prices firmly higher.

India: The weakest June rainfall in 125 years has delayed sowing and tightened private stocks, firming prices, though NAFED's large low-grade reserve caps further upside July rainfall will be decisive.

United States: Stocks are up sharply YoY giving ample supply security, but resilient demand (utilization +6% YoY) has still pushed prices modestly higher, making US origin the most stable option currently.

Brazil: Domestic prices are strengthening alongside a sharp rise in exports kernel shipments up 31% and oil exports up 58% MoM, led by strong Chinese oil demand making it the strongest momentum origin.

Argentina: A weather-delayed harvest (~60% complete) has sharply tightened supply, especially premium 38/42 blanched grade, driving the strongest price gains among all origins and elevating quality risk in unharvested fields.

Bullish | Strong bullish | Neutral / mixed | Bearish

Origin	Price trend	Supply tightness	Weather risk	Export demand	Outlook
China	Firm, June surge	Henan depleted	Harvest damage	Record arrivals	Bullish
India	Firming on delay	NAFED overhang	Weakest June in 125y	Awaiting Indonesia	Cautiously bullish
US	Ticking up	Record stocks	Planting on track	Utilization +6%	Supply-heavy
Brazil	Strengthening	Crop on track	Some uncertainty	Exports +31%	Bullish
Argentina	Rising sharply	38/42 scarce	Wet, delayed harvest	Limited data	Strong bullish

CHINA

Prices: PK2610 futures ranged 8,100–8,480 yuan/ton, with a June surge to 8,464 yuan/ton.

Henan's harvest was hit by drought, flooding, and prolonged rain —supply is now largely depleted, with cold storage holding mostly finished product. Northeast prices fell from 4.5 to below 4 yuan/jin post-holiday and remain soft, though cold-stored goods should firm once off-market supply clears.

Inventory: Downstream channels never built strong stock this season due to quality/moisture issues and weak Q2 consumption. Overall inventory is tracking below normal and slightly below last year Henan stock is mostly finished rice; Northeast stock is thin and scattered.

Oil Mills: Yihai Group is still buying, having raised prices to 8,350 yuan/ton for Baisha peanuts, with record arrivals. Luhua has paused purchasing but remains well above last year's volumes. Despite a later season start, mill purchasing intent is strong and arrivals are outpacing last year.

Demand: Early pessimism, delayed Henan supply, and quality concerns kept downstream buyers from stocking up. As Northeast prices rose, buyers shifted to just-in-time, need-based purchasing.

INDIA

Sowing Behind Schedule, Rain Window Critical

Delayed monsoon has slowed sowing in Gujarat, while Rajasthan sits at ~40% and Banaskantha at ~35% completion. The next 10–15 days are decisive rainfall in this window will determine both final sown area and production potential for the season.

Prices Firm on Tight Supply

Prices have strengthened on delayed sowing and thin private stock availability. However, upside remains capped — timely rainfall from here could quickly ease the price pressure.

NAFED Stock Overhang

NAFED continues to sit on 900,000+ MT of reserves, though largely lower-grade quality. With private holdings limited, NAFED's stock release pace remains a key lever on near-term market prices worth watching for both timing and volume.

Export Trade in Holding Pattern

Indonesia's import quota decision is due around July 25. Expect export activity to stay muted until that decision lands traders and exporters should factor this into near-term shipment planning.

Crush Capacity Constrained

Only 25% of Rajasthan's oil mills are currently operational, limited by raw material availability. Processors should track mill utilization closely as a leading indicator of local demand and pricing pressure.

Outlook

July rainfall is the single biggest variable to watch — it will shape sowing completion, production potential, and price direction through the rest of the season. Traders, exporters, and processors should treat the next 2–3 weeks as a key positioning window.

WEEKLY WEATHER & MONSOON UPDATE – INDIA

June Shortfall Raises Stakes for Groundnut Sowing Monsoon Watch — June Shortfall Raises Stakes for Groundnut Sowing

Weakest June Rainfall in Over a Century

June 2026 recorded the fifth-lowest rainfall in 125 years, coming in 39.8% below the long-term average — a shortfall significant enough to raise real concern across the kharif sowing cycle, groundnuts included.

Sowing Delays Widen Uncertainty

The weak monsoon pushed back field preparation and planting across several key regions, adding uncertainty to production prospects for major kharif crops at a stage when timing matters most.

July Seen as the Recovery Window

The weather department expects rainfall to improve in July, which could help restore soil moisture and unlock delayed sowing — a critical swing factor for how much of the shortfall can still be recovered.

El Niño Remains the Wildcard

A strengthening El Niño is the key risk to watch — it carries the potential to keep monsoon rainfall below normal through the season, which would directly pressure both sowing completion and final output.

What This Means for the Value Chain

With sowing timelines already tight, every week of July rainfall (or its absence) will have an outsized effect on acreage, crop establishment, and downstream supply.

USA

US Peanut Market Snapshot — Supply Builds, Demand Stays Firm

Stocks Surge — Supply Well Ahead of Last Year

Commercial peanut storage hit 4.07 billion lbs as of May 31, 2026 — up sharply from 2.54 billion lbs a year ago. Supply is running comfortably ahead of last season, a key backdrop for near-term price positioning.

Demand Holding Strong Despite the Supply Build

Shelled edible-grade utilization rose 6% YoY, with processors using 218 million lbs in May — peanut butter led the charge at 129 million lbs, alongside solid snack and confectionery offtake. Steady milling volumes (461 million lbs) and crush activity (48.1 million lbs for oil and meal) confirm processing demand remains healthy even as stocks pile up.

Planting Progress Confirmed by Seed Drawdown

Treated seed stocks fell sharply to 21.8 million lbs from 39.7 million lbs in April — a clear signal that planting is progressing on schedule.

Prices Ticking Up Despite Heavy Stocks

For the week ending June 20, average prices rose to 24.4 cents/lb (+1.9 cents WoW), with runner-type at 23.8 cents/lb — a firming move worth watching given the size of current stocks.

Marketings Pull Back

Weekly marketings eased to 82.8 million lbs, with runner-type volumes declining notably — a slowdown that traders should watch for signs of seller hesitation or price-hold behavior at current levels.

Trader Takeaway

The combination of record stocks, resilient demand, and a price uptick despite heavy supply points to a market where sentiment — not just fundamentals — may be driving near-term direction.

BRAZIL

Domestic Market Stays Firm Through Peak Buying Season

Brazil's peanut market held firm through the May–July seasonal buying window, with domestic prices strengthening even as crop availability remains a lingering uncertainty — a signal of solid underlying demand.

2026 Crop Outlook

The 2026 crop is estimated at 1.0–1.2 million MT from 250,000–270,000 hectares. A slight recovery in international prices is now supporting grower margins, adding confidence on the production side.

Kernel Exports Hit Season High

May peanut kernel exports jumped to ~31,000 MT — up 31% both MoM and YoY — marking the strongest month of the 2025/26 season. Algeria led as the top destination (~10,000 MT), followed by Russia (~7,000 MT), with notable growth also seen to the EU-27 and South Africa — a sign of broadening demand beyond traditional buyers.

Peanut Oil Exports Jump Sharply

Peanut oil exports climbed 58% MoM to ~17,000 MT. China was the clear driver, taking nearly 15,000 MT — almost double April's volume — while shipments to Italy also edged higher.

Trader/Exporter Takeaway

Firmer prices, a strong crop outlook, and rapidly accelerating export demand — especially from China on oil and Algeria/Russia on kernels — point to positive near-term momentum for Brazilian origin. Exporters should watch for continued buying interest from these markets, while importers may want to secure positions before further price strength sets in.

Source: Other Industry Sources

ARGENTINA

Argentina Peanut Harvest — Delays Tighten Supply, Push Prices Higher

Weather Disruptions Slow Harvest Progress

Argentina's 2026 harvest has been hampered by persistent wet and humid conditions, though recent drier weather is now aiding fieldwork progress.

Harvest Running Well Behind Normal Pace

Completion stood at only ~60% by end of June — significantly behind schedule — raising real concerns over field losses and quality deterioration in areas still awaiting harvest. This is a key risk factor for both volume and grade availability going forward.

Prices Rising on Tightening Supply

The delayed harvest has tightened near-term supply, pushing Argentine prices higher over the past two weeks — a trend traders should factor into positioning.

Current Pricing

- Blanched 38/42: US$1,630/MT
- Blanched 40/50: US$1,540/MT

Tightness Concentrated in Top Grade

Supplies of 38/42 blanched are becoming particularly scarce, adding further upward pressure to prices in that grade specifically.

Trader/Exporter/Importer Takeaway

With harvest still incomplete and quality risk building in unharvested fields, near-term supply — especially of premium 38/42 blanched — is likely to stay tight. Importers looking to secure Argentine origin may want to move before further

price gains, while exporters should monitor harvest completion rates closely as a leading indicator of available volumes and grade mix.
